

Exam : H13-527_V5.0

**Title : Huawei HCIP Cloud
Computing V5.0**

https://www.passcert.com/H13-527_V5.0.html

1. In OpenStack, which of the following descriptions about the role of Glance is incorrect?

- A. Glance is responsible for creating snapshots of virtual machines, but is not responsible for backing up the state of virtual machines.
- B. Glance supports querying and obtaining image metadata and the image itself
- C. Glance is responsible for the management of the virtual machine image life cycle
- D. Glance supports multiple ways to store images

Answer: A

2. In Huawei Cloud Stack, which of the following descriptions about the configuration and operation of the Service OM interface is correct?

- A. During the host expansion process, Service OM cannot implement host expansion and can only implement host group management.
- B. Administrators can upload public images, management images, and private images in Service OM in advance to facilitate the later distribution of virtual machines.
- C. If users have special specification requirements, the administrator can create specifications with custom labels on Service OM to make the specifications visible to specified tenants.
- D. Business virtual machines issued by users on the operation plane can be viewed in the Service OM interface, but operations such as deletion and migration cannot be performed.

Answer: C

3. Which of the following descriptions about Horizon are correct?

- A. Administrators and users can implement life cycle management of instances through Horizon
- B. Administrators and users can create subnets and assign IP addresses through Horizon
- C. Horizon is one of the global components of OpenStack and has no dependent services in the OpenStack cloud environment.
- D. Horizon is one of the global components of OpenStack and provides a web management interface to interact with other OpenStack services.

Answer: ABD

4. In Huawei Cloud Stack, which of the following descriptions of the core capabilities of the ManageOne operation and maintenance center are correct?

- A. Full coverage, the procurement and control system covers all nodes on the management side
- B. Massive management, supporting massive network elements and data access
- C. Flexible access, supporting two access methods: Agent and driver adaptation.
- D. No plug-ins, business logic does not support plug-in development

Answer: ABC

5. In OpenStack, which of the following descriptions of Keystone-related concepts are correct?

- A. A user cannot be assigned to multiple projects at the same time
- B. A user can have different roles in a project
- C. A user can only have one role in a project
- D. A user can have different roles in different projects

Answer: AC

6. In Huawei Cloud Stack, which of the following cloud services can achieve interoperability between the cloud and the local data center?

- A. Virtual Private Network
- B. Layer 2 bridging
- C. Cloud connection
- D. Cloud dedicated line

Answer: AB

7. In OpenStack, which of the following descriptions of each component are correct?

- A. The core work of Neutron is the abstraction and management of the second-layer physical network.
- B. Swift is more suitable for storing dynamic data. It provides RESTful API as the entrance to access. Each object stored has a unique URL.
- C. Keystone functions like a service bus. Horizon, Nova, Cinder and other services use Keystone to register their service endpoints.
- D. Placement is a resource management project in OpenStack. Its core function is to help users find equipment that meets resource needs.

Answer: ACD

8. In Huawei Cloud Stack, which of the following descriptions about storage resources are correct?

- A. The back-end storage with the available partition az0.dc0 can only use shared images to provision business-type virtual machines.
- B. The available partition is the back-end storage of manage-az. Only management images can be used to provision management-type virtual machines.
- C. Users cannot use the backend storage whose available partition is manage-az.
- D. The reuse ratio of back-end storage cannot be modified on the Service OM interface.

Answer: BCD

9. In Huawei Cloud Stack, which of the following fault scenarios are suitable for using the C1oudNetDebug tool for network fault analysis?

- A. The cloud private line cannot establish a connection with the peer device.
- B. The network between the host storage interface and the storage device service port is blocked.
- C. Virtual machines in different VPCs cannot communicate with each other using intranet IPs.
- D. The two virtual machines located on the same host and in the same VPC are not connected to each other.

Answer: CD

10. Which of the following descriptions of the advantages of Heat are correct?

- A. Reduce OpenStack resource usage
- B. Reduce OpenStack secondary development costs
- C. Manage OpenStack faster and more conveniently
- D. Reduce OpenStack platform maintenance costs

Answer: BCD
